TIMELY TOPICS

THE TITANIC LOSS

The whole civilized world during the past week has stood aghast as, borne upon the air, came the first message from the "wireless" operator of the S. S. Titanic that she was in distress, having struck an iceberg. It happened not far from the midnight hour. It is said that her speed was about twenty-one knots, or about twenty-six miles an hour—a tremendous speed. Many passengers were already in their berths, others were preparing to retire, and others still were reading or playing another game of cards or hearing a little more music ere they went to rest. Then the dull rattling crash came and the huge vessel's side was torn open, and the dreaded water began to flood the apartments in the fore part of the vessel. No one knew their danger. When presently orders were given to get into the lifeboats there were those who considered it a joke. The all too few lifeboats were filled, however, with women and children and just a few men to work the oars. Brave men, now understanding the danger, stood back while others filled the boats, and when they were all filled and pushed away from the wreck the great monster, the Titan—ominous word, meaning "A strong nature striving against fate"—the Titanic, the gigantic vessel, calmly slid right down into the ocean. We will not dilate upon the horror of strong men facing a watery grave, but it is said the Band played an anthem mournful, solemn, as sixteen hundred and thirty-five men and a few women went to their death. Never was there greater truth exemplified than the one "In the midst of life we are in death," than in that awful catastrophe. The whole world mourns with the many friends of those who met such an untimely end. There were men who showed the highest examples of heroism of which mankind is capable, in that wreck; they stood back while women and children—no matter their nationality—were pushed into the boats, and this we are glad to learn. There is something noble, yea, God-like in this.

ANOTHER KIND OF SELF DENIAL
Dr. S. M. Babcock, of the University of Wisconsin, is one of the few men who have handed over the results of their studies for the benefit of mankind in general without fee or reward. In 1890 Dr. Babcock invented the famous Babcock milk test, and refused to patent it, claiming that his services belonged to the state. It can readily be understood that if the famous doctor had patented his discovery it would have brought him millions of dollars. Perhaps the ordinary business man who works for nothing but dollars would dub the doctor as a fool, but there are many on the other hand who appreciate such a gift to the people. It would not be a bad thing for others to emulate such an example and hand down the result of their services for the benefit of others. After all, the mad rush for wealth is a wearisome thing, and considered in connection

tion with the serious happening mentioned above, wealth is not necessary to one's happiness nor to one's safety, and on such an occasion cannot give one any advantage over his fellow. Nor indeed should it.

REMARKABLE RECORDS

There is one firm in the United States that we should think holds a distinct record. It has a total of 3,500 employees; and cut of that number there are no less than 80 men who have served from 40 to 50 years with the same firm. There are also 188 men who have served from 30 to 40 years; and 330 men who have served from 20 to 30 years, and as many as 600 men who have served from 10 to 20 years. This certainly is a record to boast about, and we do not blame the firm of Henry Disston & Sons, the proprietors of the Keystone Saw, Tool, Steel and File Works, for making much of that fact. It certainly should speak well for such a firm that they have so many time honored men. It shows that they know how to keep their men for one thing. Their treatment of mechanics and laborers must have been exemplary for many years. It should speak well also for the class of work that is turned out. Men who have been experts at their trade for so many years must be able to turn out good reliable articles. It speaks well also for the conduct of the men. Their conduct must have been exemplary or they would not have retained their positions for so many years. There is just one thought, however, that raises a popular question. Twenty-one men have worked for that firm from 50 to 62 years, and much is made of that fact. Now, ought a man to be expected to work at all for more than 50 years? Some say he should not. Some say he should have been able to save sufficient to enable him to retire from work long before that. But much depends upon the character of the work, and its demands upon the workman. Much also depends upon the wage a man is getting. Provided a man has pleasant, interesting and congenial work, and good remuneration, enabling him to live comfortably and happily, he does not necessarily need to give up work, indeed, in many cases work is the best thing for him, if it is arranged according to his strength and ability.

Handsome Profits Made in

Feeding Beef Steers

Steers, winter-fed in Alberta this year, are being sold now at a profit of \$15.50 per head. This amount is the net advance over the cost of the cattle last fall, and the cost of the feed and covers the average loss, as well.

An interesting experiment at the Lacombe Experimental station was concluded a few days ago, by the sale of a carload of steers, which were purchased last Nov. The net profit was \$1,876.20. These steers have been kept in open corral without shelter of any kind all winter, and in 155 days the average gain per head was 280 lbs. Chop was paid for at the rate of 1 cent per lb, green feed at \$10 per ton, alfalfa at \$12 per ton and straw at \$2 per ton. The loss of one steer represented about \$50.

This is one of the most striking proofs of the theory which agricultural experts have been urging on the farmers of Alberta,

The Farmer's Store, Cayley

Clearance on Boots and Shoes

I am making a general clearance on all kinds of Ladies' and Gentlemen's

BOOTS AND SHOES

at a discount of

25 Per Cent

L. R. CASPELL

It has been the practice of farmers and ranchers in the south to sell their steers after the fall round-up to large firms, such as the P. Burns Co., who operate on an extensive scale. That these small ranchers and farmers can feed their stock through the winter at a greater profit has been demonstrated at the Lacombe farm.

The Dominion government is making provision for more extensive experiments in live stock at this station, the area of land having been increased from 160 to over 500 acres. Cattle, hogs and sheep will shortly be stocked in large numbers and large buildings for dairy and dairy herds are being built. It is proposed to begin operations with 100 head. This will be one of the largest experimental herds in the province.

Alden Hammill of Parkland has been appointed commissioner for taking affidavits.

The Dominion government has decided not to coin any Canadian dollars at present, believing there is no great demand for them. A sure sign that the government has never run a country newspaper.

a loadstone.

Mr. McNab of British Columbia

will take the services at Cayley

farmers are making every minute tell on their spring work at the present time. There is a lot of work to be done yet.

Jas. McKinnon is painting and decorating and generally fixing up his house. Rumor says that Jim will a son have some one to look after those red hens of his.

On Sunday next, April 28th, Rev. T. P. Berry, B.A., of High River, will preach missionary sermons at Zephyr school house at 3 o'clock and in the Methodist church, Cayley at 7.30. Special offerings will be taken toward the missionary work, home and foreign, of that church. Are missions of any interest to you? or are you bound up in your little self? If you are presently judged by how you distribute what you have, how will you stand? There are still more heathens than Christians. Would you believe it? China, with her 400 millions is now calling for Christian preachers and teachers. Japan, too, needs the gospel which makes Canada what it is today. The world is much the richer because of its gifts in men and money toward spreading the gospel among the nations.

Cayley Fire Brigade

The following citizens have been unanimously elected Cayley's fire brigade:

- Fire chief, J. S. Elves.
- Assistant chief, A. Durham.
- No. 1 Chemical—L. K. Caspell, captain
- E. S. Elves, assistant captain
- A. O. Brown, chemical man
- B. J. Bentley, assistant
- No. 2 Chemical—P. F. Macdonald, captain
- O. E. Mann, assistant
- D. Douglas, chemical man
- J. W. Bradley, assistant
- No. 3 Water Pump—L. Beaton, captain
- Jas. Anderson, assistant

Testing the New Fire Engines

The village fire brigade had a practice last week, and also a testing of the new Bickle chemical fire engines. For this purpose a dummy building was erected, with plenty of air holes left to ensure a good draught, over which several gallons of coal oil was poured, thoroughly saturating the lumber. The building was then set on fire, which was allowed to get well under way. The chemical fluid was then thrown on the now leaping flames from the engines, when, lo, presto, out went the flames and the building became a blackened mass of dense smoke in a few seconds and the fire wiped out. The experiment was tried with the same results. The building still remains, on which further tests are to be made. So far the engines have given every satisfaction, and the citizens feel more secure should the engines be needed for use in the village, which everyone hopes will be many a long day.

Keep the Boys on the Farm

Fathers want to give their boys on the farm, but too many of them do not want to give the boys a start, writes U. Carr. They say, "Let them dig their way out as I did before them."

Every boy cannot work hard all of the time in heat or cold; or in rain or when the sun shines, but when he asks for a holiday often he is sent back to work with a sore and heavy heart, and many a boy on the farm seldom gets a chance to go anywhere for pleasure. That is discouraging.

Then, many farm boys are denied a little spending money, which every boy craves. He ought to have a little change that he can spend just as he pleases. I know farmers who always leave their boys at home to care for the house and the stock while their parents

go off to town or to places of amusement. This always makes a boy sore.

This is only one side of the question. On the other hand some fathers indulge their boys too much, and spoil them. They say, "I have worked too hard all my life and now I am going to give my boy a chance to make a living easier than I did." Another says: "I will give my boy nothing but tools and let him make his own living." I think this is the best plan.

Boys, to be content on the farm, must have some stock and pets of their own. This will do more to keep them contented than anything else. I know what I am talking about, for I live on a farm. I have stock of my own, and I wouldn't change places with any town boy I know. I am only thirteen years old, but I have a horse, a cow and some hogs. I am proud of my stock.

For sport the boy likes a gun, and he likes to trap rabbits and other game.

He also likes to have a room of his own, where he can keep all of his own things. A bookcase filled with books will gladden his boyish heart, and fathers should buy their boys books when they know they want them.

Some boys are born for one purpose in life, and some for another, and parents should find out what he can do best, and then help him in that direction.

Continual faultfinding makes a boy's heart sore and discourages him. A boy should not be punished for every little fault, but he should be talked to and shown where he is wrong. Most boys are good at heart and do not intend to do wrong, and if they can be helped to see what is right they will generally do it.

Caring for the Pigs

In order that we may take proper care of the young pigs, it is necessary that we know about what time to expect them.

I have made it a rule to keep a record of the date on which the sows are bred.

By reference to my record I find that my sows follow from the 12th to 15th day from breeding.

Some claim that an old sow will go longer than a young sow, but I bred a yearling, a two-year-old and a six-year-old sow all on the same date. These three sows all farrow on the same day.

I like for my sows to be into a thriving condition when the pigs are farrowed. In fact, I like for them to improve in flesh during the entire period of gestation.

Some people are afraid of getting their sows too fat, and I suppose that they can be made too fat, but they ought to be in good flesh. They should have a surplus laid up for the suckling of the young pigs, because it is hard to keep a sow from going down in flesh rapidly when the pigs have to depend upon her for their food.

The sows are given separate lots with a good shelter, close warm house, if the weather is cool about a week before they are due to farrow.

The sows are fed sparingly for a few days after farrowing, then gradually brought up to a full ration.

It has always been hard for me to keep from feeding the sow too much while the pigs are young, and as a result I have had several cases of scours with the young pigs.

When I find the pigs beginning to scour, I give the sow fifteen to twenty drops of laudanum in her feed for a few days. Her feed is reduced and this usually checks the scour in a day or two. If I have not any laudanum I have used powdered charcoal with

good results.

As soon as the pigs are old enough to eat I give them a separate trough where they can eat without being disturbed by the mother. They are given a mixed feed of middlings, cornmeal, or other ground feed mixed with water. The sow gets a similar ration. More corn is used in cold weather than if the season is warm.—A. J. Legg.

"Friday" ship
A true story is told of a whaling ship, the "Friday," which was back in the early years of the republic, determined to exhibit the fallacy of the Friday superstition. He contracted on a certain Friday for the building of a ship, and it was arranged that the keel of this vessel was laid on Friday, that she was launched on a Friday, named Friday, commenced loading on a Friday and sailed into the stream on the same day of the week. To add to the possibilities of disaster, a negro cook named Friday was engaged, and thus fully freighted with the sinister name, the Friday sailed on a Friday, bound for a port in the West Indies. From that day to this no tidings of the ill conditioned craft have been received.

Fest of Fools
The best authorities agree that the origin of the ancient custom of celebrating a feast of fools is unknown. Some identify it with the Roman feast of fools on March 21. But why did the pope institute the feast of fools in India March 21 is "the bull festival," when all manner of pranks are played upon the hee-hoers. But again, where did the Hindus get it? The French call the April fool "le poisson d'avril" (April fish). To the Scotch he is a "gaw" (a cuckoo).

Five Impossible Men.
Dr. Elsie once asked Schumann how he got on with Wagner. "Not at all," replied Schumann, "for me Wagner is impossible. Doubtless he is a very clever man, but he talks too fast—we cannot get a word in." Some time after, in an interview which Hauslick had with Wagner, allusion was made to Schumann. "With Schumann," said Wagner, "an understanding is possible to arrive at an understanding. He says nothing. Some years ago on my return from Paris I called upon him to talk of opera, concerts, composers and other interesting matters with which I had become acquainted. Schumann looked at me steadily, or rather he looked into space, without saying a word. I took it for granted that he was not interested. He is an impossible man."
